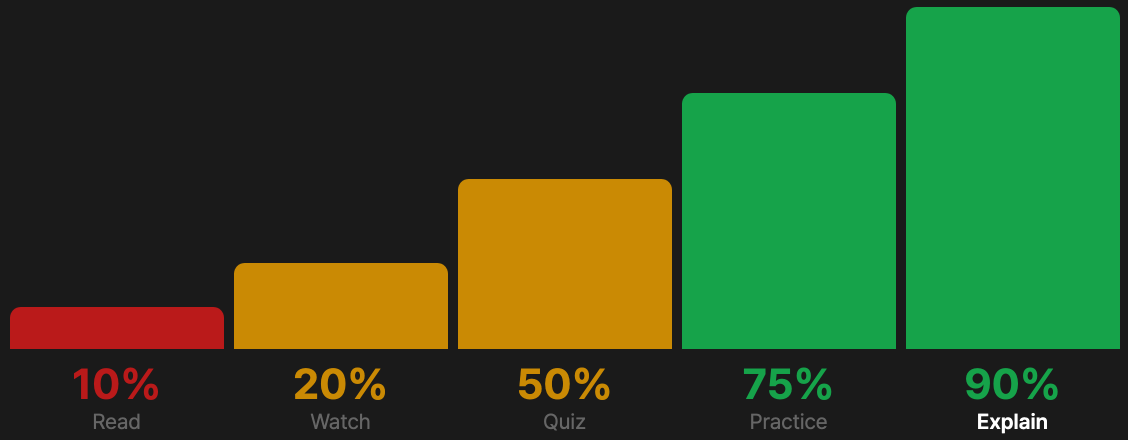
THE FORGETTING PROBLEM

You watched a 1-hour lecture yesterday. Today you can't explain a single concept.



"If you can't explain it simply, you don't understand it." — Feynman

Digest turns passive into active.

Paste any URL, YouTube, or PDF → 5 experiences that force your brain to **work**.

See it
Mindmap — structure at a glance

Dual Coding

Hear it
AI Podcast — 2 hosts debate it

Elaboration

Test it
10 MCQs — wrong = learn why

Active Recall

Remember it
Flashcards — before you forget

Spaced Rep.

Prove it — "Explain this concept."
AI Feynman tutor. Finds your gaps. Never gives the answer. Brain must sweat.

Desirable Difficulty

RALPH PROCESS

Spec-First. Test-First. Then Walk Away.

WHAT I WROTE (before any code)

📋 **SPEC.md — 895 lines**
Every prompt, schema, endpoint, build order, design tokens

🧪 **VERIFIED-API.md — 504 lines**
Every LLM call tested and passing before build started

✅ **17 Test Scripts — 1,500+ lines**
API tests, Playwright browser E2E, audio quality checks

🎨 **Google Stitch Design System**
"Cognitive Sanctuary" — UI spec for the agent to follow

WHAT THE AGENT DID (autonomously)

1. Read spec → generated build plan
2. Built 4 rounds — BE + FE, commit after each
3. Ran verify scripts → fixed failures → retested
4. Shipped working app — 20+ commits, 5K+ lines

I wrote the blueprint. The agent built the house.

Ralph rule: don't touch the laptop while it works.

KILLER FEATURE

Claude Agent SDK — Self-Healing Code

Inspired by Anthropic's **Harness Design for Long-Running Apps** — the GAN-inspired pattern: separate the **Generator** (builds) from the **Discriminator** (judges). Self-evaluation bias means code can't objectively judge itself.

Generator → code →
oh-my-claudecode
writes code

← errors ←

Discriminator
Claude Agent SDK
tests + judges

→

Ship ✓
all tests pass
verified quality

Test → Fix → Retest Loop

Opus 4.6 reads failure + source code → patches → reruns. Autonomous. Up to 5 cycles.

Playwright Browser E2E

Agent opens real browser → clicks tabs → answers quiz → flips cards → verifies UI works.

Audio Intelligence

LLM listens to podcast WAV → confirms real speech, 2 speakers, good quality.

See it. Test it. Prove it.

Paste anything. Understand everything.

🗺️ Map ❓ Quiz 🃏 Cards 🎙️ Podcast 🎓 "Explain it."
